Module Federation

Joinv1 add ModuleFederationPlugin
`config.plugin('mf').use(ModuleFederationPlugin)`

Joinv2 add @originjs/vite-plugin-federation
`plugins: [federation({remotes: {'app': {
 external: 'http://localhost:3000/
 remoteEntry.js',
 format: "var",}}})]`

Joinv1 the module needed to add inject file
`export const inject = (parentElementId:string) =>
 ReactDOM.render(<App />,
 document.getElementById(parentElementId));`

Joinv2 use the module by importing
`import { inject, cleanup } from '[remotes config]/
[Joinv1 expose path config]';`
